1.0 INTRODUCTION AND SCOPE

1.1 INTRODUCTION

This document presents preliminary results for Phase III of a study to seek ways of developing more accurate measures and weightings to improve resource requirement predictions for operational and emerging weapon systems. These improved measures can then be used on new programs to predict maintenance demands (human and material), for design tradeoff studies early in the system development process to reduce the overall weapon system life cycle cost and increase mission readiness.

This document covers the results and status of the first half of Phase III of this total study effort. Phases I and II (1978-1979), of the study effort analyzed actual field data on various selected avionics, engine and other mechanical subsystem equipments to determine the possible equipment related parameters that could impact the expenditure of support resources. Phases I and II study details and results are documented in Boeing IR&D document D194-10074-1.

During Phase III (1980) follow-on in-depth statistical analysis of the preliminary findings was performed to identify various subsystem equipment maintenance resource demand vs generic parameter(s) sub-set(s) relationships, such as equipment, operational, environmental, maintenance, and general characteristics. The plan for the second half of Phase III (1981) is to further investigate those maintenance resource demands that have strongly correlated impact parameters within the various subsystems and equipments for identification of positive relationships and their cause factors.

1.2 SCOPE

The scope for this overall study effort encompasses the following activities:

a. PHASES I AND II (1978-1979)

- (1) Develop study plans
- (2) Identify, obtain and review current publications
- (3) Select weapon systems and subsystem equipments
- (4) Identify possible equipment impact parameters
- (5) Identify, obtain, and process historical field experience data
- (6) Data analysis and parameter prioritizing
- (7) Prepare presentations and documentation

D194-10074-2

b. PHASE III (1980-1981)

- (1) Extract applicable source data from Phase I and II results
- (2) Prepare input data for computerized regression analysis
- (3) Perform stepwise regression for generic single type parameter classes
- (4) Identify those parameters that show strong correlation within the applicable subsystem equipments
- (5) Investigate positive relationships and their cause factors
- (6) Document final report

2.0 BACKGROUND

The Logistics Modeling and Input-Output Data Requirements (see References 1 through 6) constitutes a widely recognized Air Force system of computer modeling/analysis techniques designed to simulate the operations and support functions of current inventoried and new development weapon systems within the DoD. These standard Air Force models, as called out in new requests for proposals, are used to predict manpower and material requirements of emerging weapon systems. The input parameters for such simulation are traditionally elements such as maintenance actions, failures, and tasks based on various equipment operating measures. These measures, in some cases, may be totally irrelevant. Some irrelevant measures cause erroneous estimates of manpower and material support requirements. Implementation of these erroneous requirements wastes money and/or reduces system/subsystem readiness. The problem is choosing which measure(s) should be used in predicting logistics resources required to support existing and new fielded weapon systems. This problem is similar for most types of hardware whether mechanical or electrical/electronic. Another problem with the traditional equipment operating measures is that they are insensitive to operational and environmental conditions. For example, in current practice, wide swings in flying hours result in wide swings in maintenance manhours/flight hour measures when in reality, the maintenance resource load hardly varies (Reference 7). Also, there is the environmental/weather impact on maintenance, which may be relatively unrelated to the operating hour or sortie measures.

The need for more accurate means to predict maintenance manpower and material resource requirements and costs for new systems is well documented in the attached reference list. (See References 8 through 13.)

3.0 STUDY OBJECTIVE

The general objective of this research project is to develop more accurate measures and weightings to improve the manpower and other resource requirement predictions for operational and emerging aircraft weapon systems. These improved measures can then be used on new weapon system programs to predict logistics demand rates for design tradeoff studies early in the system development process to reduce life cycle

costs and increase mission readiness. Specifically the study objectives were to:

- (1) During Phase I review related studies, select a representative cross-section of weapon systems and subsystems/equipments; identify the applicable parameters/variables; acquire the data and analyze the avionics and engine subsystems for favorable relationships.
- (2) During Phase II continue to analyze the favorable relationships on the avionics and engine subsystems while acquiring data and analyzing the other non-electronic or engine subsystems for additional favorable relationships.
- (3) During Phase III the study objective is to perform in-depth analysis of the relationships detected in Phases I and II and to identify the causative factors for those parameters that show strong correlations with maintenance resource demands (expenditures).

4.0 DETAILS OF THE STUDY

The following sections provide the details of the study applications and approach. Paragraph 4.1 discusses the study plan and provides a general overview of the Phase I and II study efforts. Details and results of the Phase I and II study are contained in Boeing document D194-10074-1. Paragraphs 4.2 through 4.4 contain the results, conclusions, recommendations, and supporting data for the first half of Phase III.

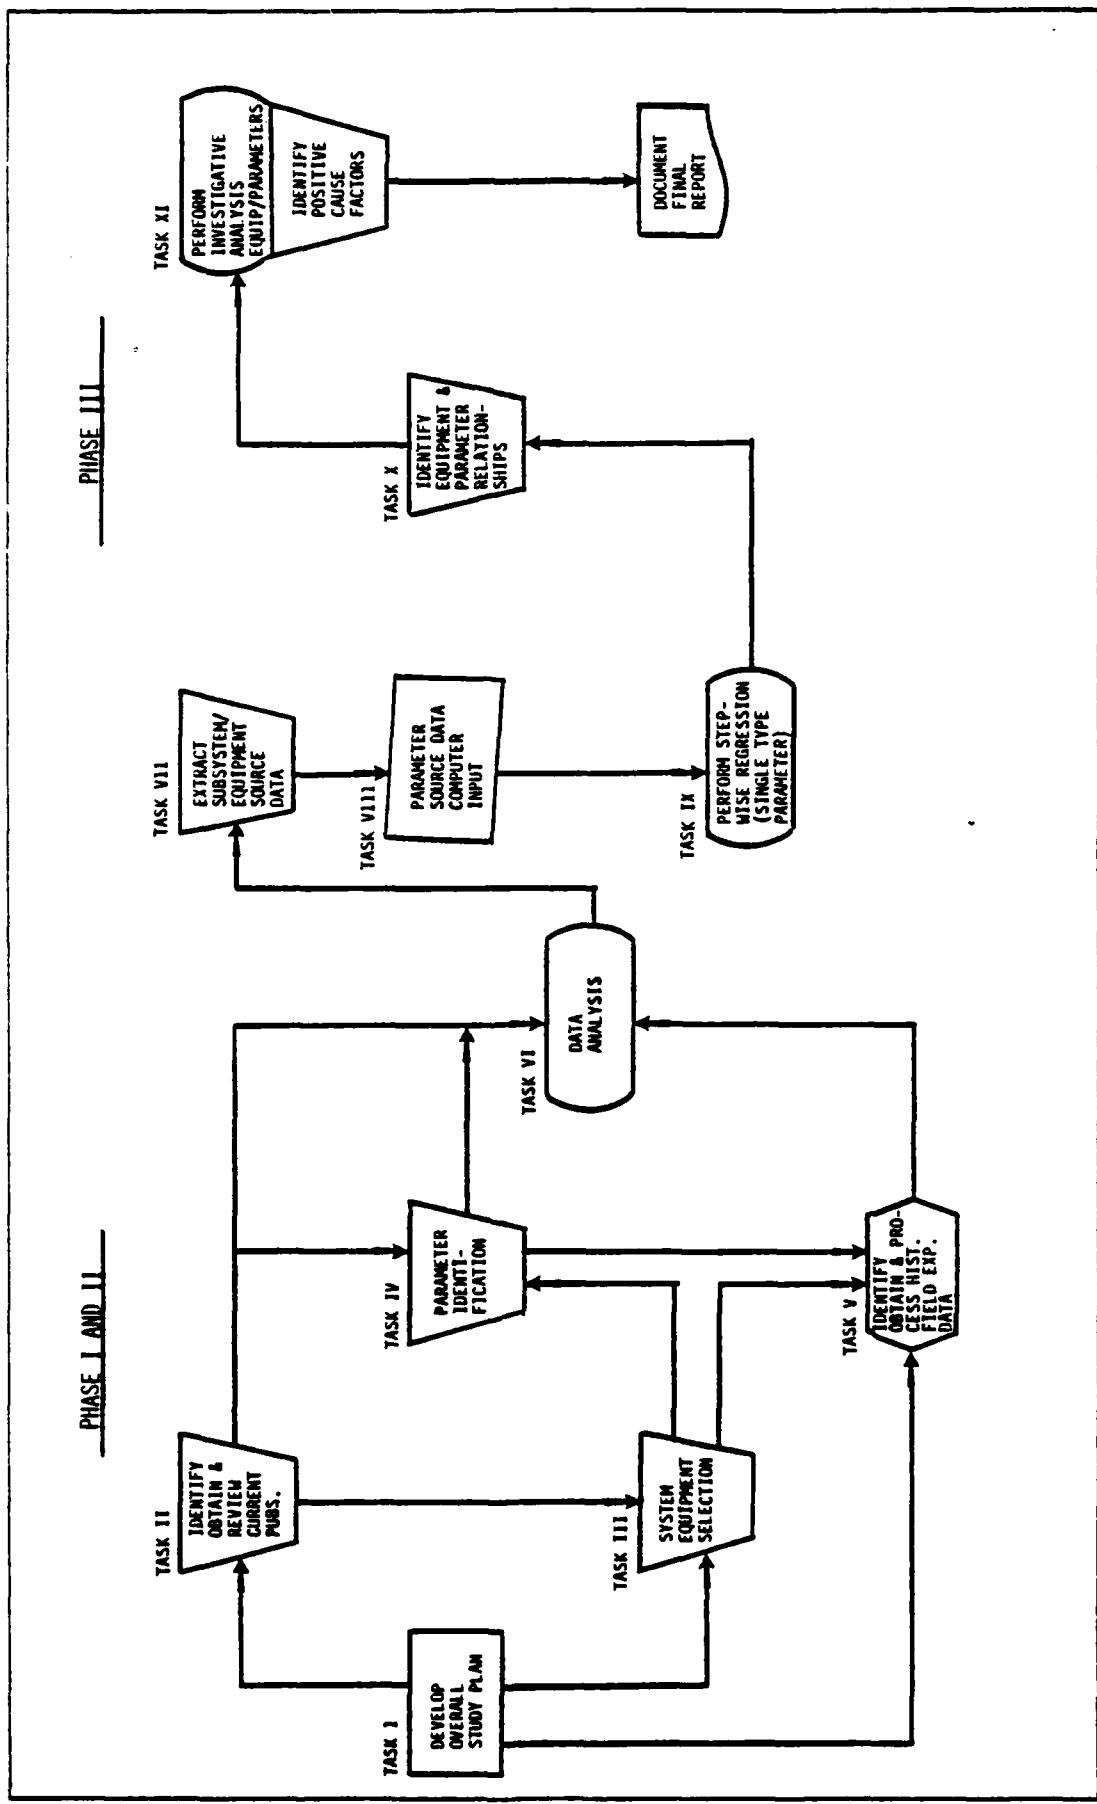

4.1 STUDY PLAN - TASK I PHASE I AND II

Application of the chosen approach required the selection of a study subject population; the selection of representative equipments/equipment characteristics for analysis; the selection of the various parameters; the development of data normalization strategy; refinement of existing computer programs to ease the data manipulation workloads; the extraction of appropriate study data; and the integration, manipulation, and analysis of the foregoing elements to obtain meaningful relationships.

4.1.1 GENERAL APPROACH

The general approach to satisfying the study objective of developing more accurate measures and weightings to improve the manpower and other support resource requirement predictions for operational and emerging weapon systems is illustrated by the macro level task flow diagram of Figure 1. This approach is an overview of the entire study that will result in an organized and prioritized body of decision criteria and parameters that may be used by logistics managers, supervisors, technicians, and other decision makers in the process of predicting resource demand rates for operational and new emerging weapon systems.

FIGURE 1 MACRO LEVEL TASK FLOW DIAGRAM

- The fundamental approach for the overall study is to identify, acquire and analyze actual data gathered on selected hardware from a cross-section of weapon systems. Consideration of the time and study resources available required the study to be structured into three phases to be completed sequentially. Phases I and II were accomplished in 1978-1979, and the results are contained in Boeing IR&D Document D194-10074-1. Phase III follow-on analysis was scheduled for 1980 and 1981. The first half of Phase III (1980) accomplishments are discussed in this document.
- The following subtasks were planned and accomplished during Phase I and II:

Task I - Develop Overall Study Plan

- (a) Develop general approach
- (b) Develop project schedules
- (c) Identify data requirements
- (d) Develop key word list for STINFO search

Task II - Identify, Obtain and Review Current Publications

- (a) Request STINFO search
- (b) Identify, Obtain and review applicable documentation
- (c) Construct data file, categories and elements
- (d) Develop data file compendium

Task III - Subsystem Equipment Selection

- (a) Identify candidate weapon systems for which data is available
- (b) Develop subsystem equipment selection criteria
- (c) Identify (by matrices) subsystem equipment applications by type weapon system
- (d) Select subsystem/equipment item candidates to be studied

Task IV - Parameter Identification

- (a) Identify potential impact parameters
 - (1) Maintenance
 - (2) Hardware
 - (3) Operational
 - (4) Environmental
 - (5) General characteristics
- (b) Construct parameter input data lists for computerized analysis
 - (1) Maintenance
 - (2) Hardware
 - (3) Operational
 - (4) Environmental
 - (5) General characteristics

Task V - Identify, Obtain and Process Historical Field Experience Data

- (a) Identify data elements and categories
- (b) Identify and screen data from in-house or other known sources
- (c) Obtain and process data for analysis using existing data processing programs when possible
- (d) Enter applicable data into the data file developed in Task II

Task VI - Data Analysis/Parameter Prioritizing

- (a) Evaluate equipment/parameter selection and formulate collected data
- (b) Apply "PKING" data manipulation program to the equipment/parameter source data and produce scatterplots
- (c) Visually screen output scatterplots to detect likely parametric relationships
- (d) Rank order developed relationships and document results by sub-system/equipments

- The following subtasks are planned for Phase III:

Task VII - Extract Subsystem Equipment Follow-on Scource Data

- (a) Maintenance resource demand parameters
- (b) Equipment parameters
- (c) Operational parameters
- (d) Environmental parameters
- (e) General characteristic parameters

Task VIII - Structure Source Data into Subsystem Equipment/Type Parameter Data Sets

Reconstitute extracted/normalized source data into generic type parameter data sets within each subsystem and prepare for terminal input processing.

Task IX - Perform Computerized Stepwise Regression Analysis

- (a) Input applicable data for each subsystem equipment
- (b) Perform stepwise regression analysis on each data set within each subsystem to identify strong correlated parameters and weed out those parameters that show no impact on the demand for resource expenditures.

Task X - Identify Relationships Between Maintenance Resource Demand (MAD) And Subsystem Equipment Impact Parameters

Identify, assemble, correlate and analyze the equipment, operational environmental, maintenance and general parameters that showed strong correlation to the maintenance resource demand parameters in the stepwise regression analysis.

Task XI - Perform Investigation of Causative Factors

- (a) Develop field survey instruments
- (b) Conduct field surveys for identification of underlying cause factors for each subsystem/equipment relationship
- (c) Perform comparative analysis of survey causative factor data and
- (d) Publish results in Boeing documentation formatted for adoption in applicable subsystem/equipment MIL/Handbooks and Lessons Learned documents.

4.1.2 STUDY SCHEDULE AND MILESTONES

The overall study schedule and major milestones are presented in Figure 2. The Phase I - 1978 portion reflects the schedule and study accomplishments for the calendar year 1978 and the Phase II - 1979 portion reflects the schedule and study accomplishments for the calendar year 1979. The Phase III portion shows the schedule and milestones for calendar years 1980 - 1981.

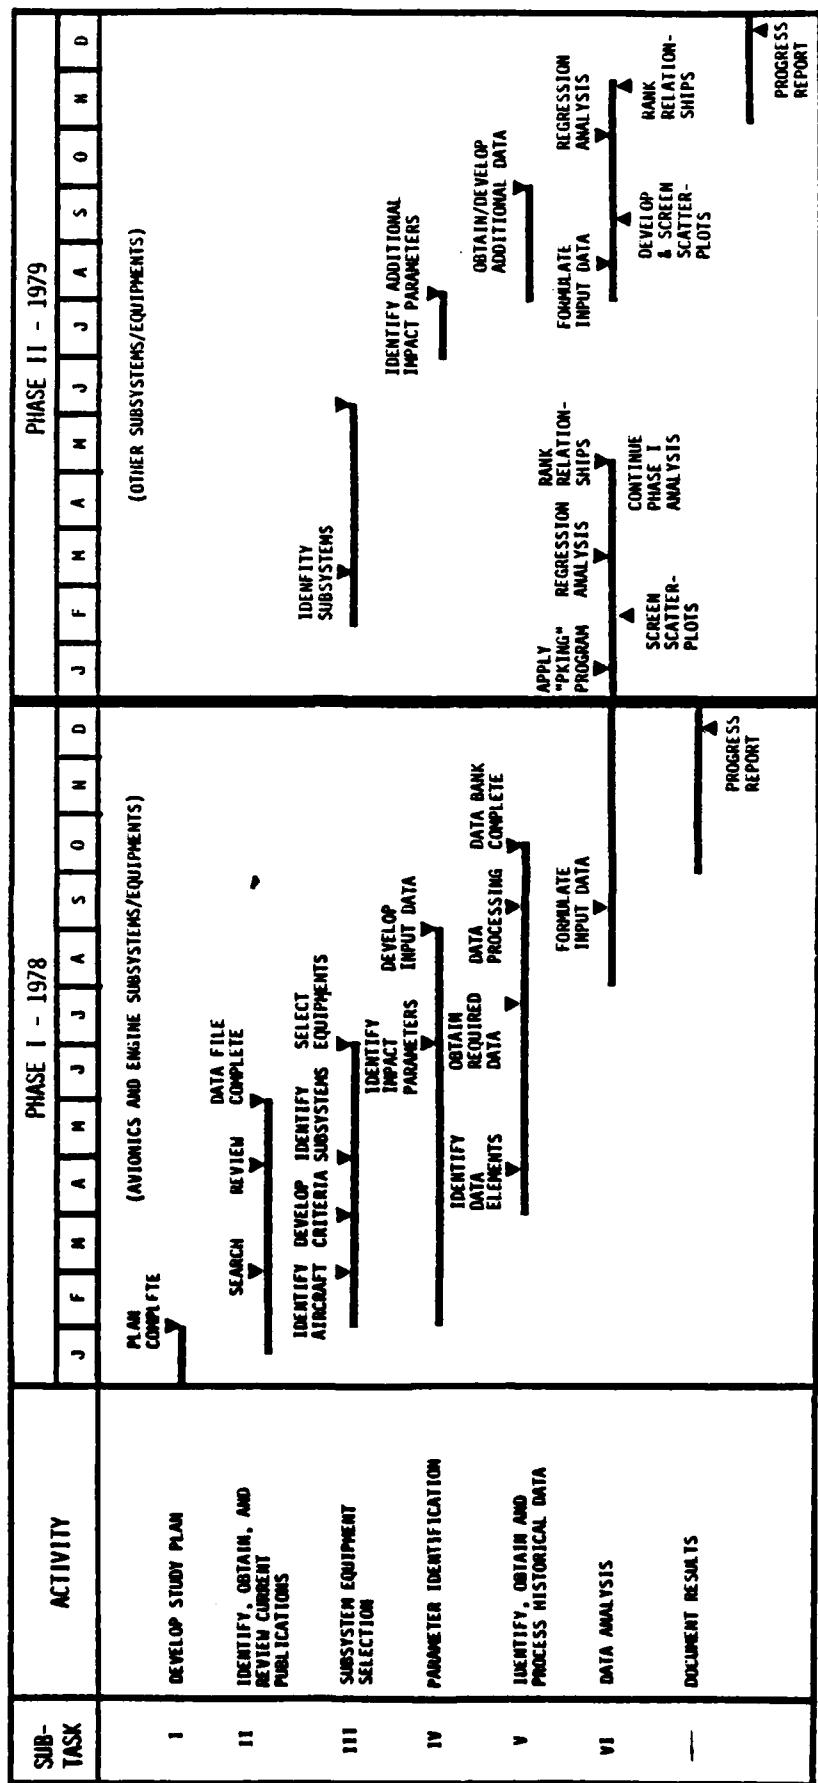

4.2 DEVELOPMENT OF SOURCE DATA FOR GENERIC PARAMETER CLASSES

The next step in the process of development of comprehensive maintenance prediction techniques was to explore the feasibility of generic estimating measures and weightings whereby maintenance resource demands for a given subsystem/equipment subset could be predicted from equipment, operational, environmental, maintenance, or weapon system general characteristic type parameters. Subsequently generic type parameter data sets were assembled for the effort. These data sets were extracted from the data base acquired through processes of the Phase I and II study efforts (refer to D194-10074-1), and are the parameters that were found to be significantly correlated with the various subsystem/equipment maintenance resource demands during the Phase I and II analysis. These data sets are included in Appendix A (Tables A-1-1 through A-29-6) and are arranged by generic type parameter within each of the 29 subsystems analyzed.

4.3 PERFORM ANALYSIS OF GENERIC TYPE PARAMETERS

The approach taken for this portion of the study was to utilize the source data as discussed in paragraph 4.2 above to perform regression analysis to identify the strong correlated parameters within each generic type parameter category and by aircraft grouping that could be utilized for the estimation and prediction of maintenance resource demand(s) within the individual subsystem/equipment items being studied.

The analysis accomplished to-date in Phase III has been to examine the single preliminary relationships identified in Phases I and II (refer to D194-10074-1) as follows:

D194-10074-2

FIGURE 2 (CONT) OVERALL STUDY SCHEDULE AND MILESTONES

- a. First, the source data was structured into generic type parameter, i.e. (equipment, operations, environmental, maintenance, and aircraft general) categories.
- b. Second, data files were established for the generic parameter types within each of the following aircraft type groupings:
 - (1) 7 Aircraft Composite - 7 Aircraft Types - 7 Data Points
 - (2) B-52G Aircraft - 10 Bases - 10 Data Points
 - (3) KC-135A Aircraft - 10 Bases - 10 Data Points
- c. Third, step-wise regression analysis was then applied to each subsystem data set (Maintenance Resource Demand vs Generic Maintenance Impact Parameter(s)) within each of the three aircraft groupings to identify correlations (best fit analysis) that may quantify and explain maintenance resource demand as a function of a certain parameter or subset of parameters. The computer package utilized was Boeing Computer Services "Conversational Terminal System" statistical program package (STATPAK), step-wise regression subroutine (Reference 14). This program allows the analyst to experiment freely with the choice of independent variables to be included in the regression analysis and thus find an optimum fit of the data in terms of multiple correlation coefficient, standard error of the estimate, and the T-statistics of the included variables. This process resulted in 741 individual computerized step-wise regression analysis being generated within the 29 subsystems and across the three aircraft type groupings as shown in Table 1. Approximately 50% of these analysis showed correlation of better than 50% with various parameter subsets within the various subsystems being studied. Table 2 reflects the parameters that correlated to the various maintenance resource demand measures within each of the 29 subsystems and across the three aircraft type groupings. Appendix B contains complete descriptions of all the parameters listed in Table 2.

4.4 CONCLUSIONS AND RECOMMENDATIONS

4.4.1 CONCLUSIONS

This report is an interim progress report that describes the work accomplished during the first half of Phase III (1980) of this study effort.

In summary during 1980, all applicable source data was gathered and computerized for each of the following three aircraft data groupings: (1) seven aircraft composite - seven bases (seven data points); (2) B-52G ten base data set (ten data points); and (3) KC-135A ten base data set (ten data points). Step-wise regression analysis was then performed within each generic type parameter class, for each of 29 study subsystems, on each of the three aircraft data groupings. This analysis resulted in 741 individual computerized step-wise regressions being generated.

THE BOEING COMPANY

More than 50% of these analysis showed correlation strong enough to be utilized for the remainder of the Phase III analysis to be performed in 1981.

Various data sets and some of the preliminary relationships identified during the previous phases of this study have already been utilized in support of DoD proposal activities and active program logistics studies. Examples of some of these applications are as follows:

- 1 - AMST (YC-14) Program selected subsystem/equipment logistics analysis trade studies.
- 2 - AWACS (E-3A) Program logistics support analysis and cost impact studies.
- 3 - C-X Proposal activity logistics support analysis trade studies and selected subsystem/equipment removal and total task identification validation.

The study data and some relationships have been utilized in support of the above activities to identify impacts and validate estimates of support resource demand activities such as: Equipment Failure Rates, Removal Rates, and Maintenance Manhour Rates.

4.4.2 RECOMMENDATIONS

The following recommendations are provided as a guide to the planned follow-on study effort and application of the results already accomplished.

- a. The next step of this study should continue as originally planned in the schedule (Reference Figure 4.2.1-1), which consists of the following subtasks:
 - (1) Refine equipments and parameter identification to those equipments and the operational, environmental, and maintenance demand parameters that showed strong correlation in the analysis effort of Phase III.
 - (2) Identify, and integrate causative information against each subsystem/equipment positive correlated parameters to allow for validation of the individual relationships identified in the earlier study effort.
 - (3) Analyze and prioritize collected information necessary to test and define the identified relationships and develop positive factors that will increase the useability and credibility of these relationships during logistics support/design trade studies.

THE **BOEING** COMPANY

- b. The following recommendations are provided for a guide to application and possible follow-on related studies using the data, methods and findings already developed.
 - (1) The data base assembled during study tasks one through four contains a wealth of organized data that will be useful for logistic, operations, and environmental analyses for aircraft. The data are also useful for comparability analyses of emerging weapon systems.
 - (2) The maintenance resource demand impact relationships identified are immediately applicable to the identification and quantification of the design, operational, environmental, and maintenance factors which impact the maintenance of aircraft equipment.

APPENDIX A

These Phase III study parameter input data tables have been arranged by generic type parameter (1-Maintenance Resource Demand, 2-Equipment, 3-Operations, 4-Environmental, 5-Maintenance and 6-Aircraft General) within each of the 29 subsystem equipments being analyzed. Appendix B contains the complete identification and descriptions of the parameters listed in these Appendix A tables.

APPENDIX B

STUDY PARAMETER IDENTIFICATION TABLES
(PHASE III)

Phase III study parameter identification tables are as follows:

<u>TITLE</u>	<u>TABLE</u>
Maintenance Resource Demand (MRD) Parameter Identification	B-1
Equipment Parameter Identification	B-2
Operational Parameter Identification	B-3
Environmental Parameter Identification	B-4
Maintenance Parameter Identification	B-5
Aircraft General Parameter Identification	B-6

204
0194-10074-2

TABLE B-1 MAINTENANCE RESOURCE DEMAND (MRD) PARAMETER IDENTIFICATION
PHASE I AND PHASE II (SUBSYSTEM EQUIPMENTS)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
PHASE I (AVIONICS) EQUIPMENT			
A01	FAILURES PER ACFT	REAL	NO/ACFT/YR
A20	EQUIP MAINT MANHRS PER ACFT	REAL	NO/ACFT/YR
A21	EQUIP TOTAL REMOVALS PER ACFT	REAL	NO/ACFT/YR
A22	EQUIP GROUND ABORTS PER ACFT	REAL	NO/ACFT/YR
A23	EQUIP AIR ABORTS PER ACFT	REAL	NO/ACFT/YR
PHASE I (ENGINE) EQUIPMENT			
P01	FAILURES PER ACFT	REAL	NO/ACFT/YR
P17	UNSH MAINT MANHRS PER INSTALLED ENGINE	REAL	MANHRS/NO ENG/10
P18	UNSH MAINT MANHRS PER ACFT	REAL	NO/ACFT/YR
P19	TOTAL ENGINE COMPONENT REMOVALS PER ACFT	REAL	NO/ACFT/YR
P20	ENGINE GROUND ABORTS PER ACFT	REAL	NO/ACFT/YR
P21	ENGINE AIR ABORTS PER ACFT	REAL	NO/ACFT/YR

TABLE B-1 MAINTENANCE RESOURCE DEMAND (MRD) PARAMETER IDENTIFICATION
PHASES I AND PHASE II (SUBSYSTEM EQUIPMENTS)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
PHASE II (OTHER) EQUIPMENT			
R01	FAILURES PER ACFT	REAL	NO/ACFT/YR
R02	MAINT MANHRS PER ACFT	REAL	NO/ACFT/YR
R03	EQUIPMENT TOTAL REMOVALS PER ACFT	REAL	NO/ACFT/YR
R04	EQUIPMENT GROUND ABORTS PER ACFT	REAL	NO/ACFT/YR
R05	EQUIPMENT AIR ABORTS PER ACFT	REAL	NO/ACFT/YR
R06	EQUIPMENT CANNIBILIZATIONS PER ACFT	REAL	NO/ACFT/YR

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE I (AVIONICS)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL / SCALED	UNIT OF MEASURE
A02	EQUIPMENT LOCATION ON ACFT	SCALED	WEIGHTED NUMBER
A03	EQUIPMENT WEIGHT	REAL	LB'S
A04	EQUIPMENT VOLUME	REAL	CU IN
A05	SRU COUNT	REAL	NUMBER OF SRU'S
A06	OPERATING TEMPERATURE	REAL	DEGREES "F" MEDIAN
A07	COOLING METHOD	SCALED	WEIGHTED NUMBER
A08	PROTECTION DEVICES	SCALED	WEIGHTED NUMBER
A09	NUMBER OF TEST POINTS (ORG LEVEL)	REAL	NUMBER
A10	REQUIRED AGE	SCALED	WEIGHTED NUMBER
A11	AGE AVAILABILITY	REAL	PERCENT
A12	AGE UNRELIABILITY	REAL	PERCENT
A13	Avg OPERATING TIME PER SORTIE	REAL	HOURS
A14	RETEST OK RATE	REAL	PERCENT
A15	ON-OFF CYCLES PER FLYING HOUR	REAL	NUMBER/10 FLY HR

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE I (AVIONICS)

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE I (ENGINES)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA/SCALED	UNIT OF MEASURE
P02	TOTAL NO OF INSTALLED ENGINES	REAL	TOTAL NUMBER
P03	TAKE-OFF THRUST PER ENGINE	REAL	LB'S/10
P04	WEIGHT PER ENGINE	REAL	LB'S/10
P05	VOLUME PER ENGINE	REAL	CU FT/10
P06	DENSITY PER ENGINE	REAL	LB'S/CU FT/10
P07	NO COMPRESSOR SECTIONS PER ENGINE	REAL	NUMBER
P08	NO COMPRESSOR BLADES PER ENGINE	REAL	NUMBER
P09	TURBINE SECTION SIZE	REAL	FEET
P10	MAX ENGINE COMBUSTION TEMP	REAL	DEGREES "C"
P11	MAX ENGINE FUEL FLOW	REAL	LB'S/HR/10 PER ENG
P12	MIN ENGINE FUEL FLOW	REAL	LB'S/HR/10 PER ENG
P13	ENGINE PRIME DEPOT	SCALED	NUMBER (SCALED VALUE)
P14	ENGINE AGE AVAILABILITY	REAL	PERCENT
P15	ENGINE AGE UNRELIABILITY	REAL	PERCENT

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE I (ENGINES)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE	WEIGHTED VALUE
P16	ENGINE VIBRATION FACTORS	SCALED		

210
D194-10074-2

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE II (OTHER SUBSYSTEMS)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
F01	LOCATION OF EQUIPMENT ON THE AIRCRAFT	SCALED	SCALED VALUE
F02	PRIMARY MATERIAL - COMPOSITION TECH LEVEL	SCALED	SCALED VALUE
F03	EQUIPMENT WEIGHT	REAL	POUNDS
F04	EQUIPMENT VOLUME	REAL	(GAL/10) (CU FT) (CU IN) (SQ FT)
F05	OPERATING TEMPERATURE	REAL	DEGREES F
F06	SUPPORT EQUIPMENT COMPLEXITY	SCALED	SCALED VALUE
F07	SUPPORT EQUIPMENT UNRELIABILITY	REAL	PERCENT
F08	TYPE OF FAILURE PROBLEMS	SCALED	SCALED VALUE
F09	RETEST OK VERIFICATION RATE	REAL	PERCENT
F10	ON/OFF CYCLES PER SORTIE	REAL	CYCLES/SORTIE
F11	GROUND TO FLIGHT OPERATING RATIO	REAL	PERCENT
F12	RELATIVE RELIABILITY OF EQUIPMENT DRIVING FORCE	SCALED	SCALED VALUE
F13	REMOVALS TO ACCESS OTHER EQUIPMENT	REAL	NO/ACFT/YR
F14	SEVERITY OF FOD	SCALED	SCALED VALUE

TABLE B-2 EQUIPMENT PARAMETER IDENTIFICATION - PHASE II (OTHER SUBSYSTEMS)

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
F15	PRINCIPLE FAILURE CAUSE	SCALED	SCALED VALUE
F16	EQUIPMENT PROTECTION METHODOLOGY	SCALED	SCALED
F17	EQUIPMENT PRESSURIZATION LEVEL	REAL	PSI
F18	RAIN REMOVAL TECHNOLOGY (WINDSHIELD)	SCALED	SCALED VALUE
F19	MOUNTING POSITION (WINGS)	SCALED	SCALED VALUE
F20	POWER RATING (GENERATORS)	REAL	KVA RATING
F21	NO OF TIRE PLY'S (TIRES)	REAL	PLY'S PER TIRE
F22	LANDINGS PER TIRE (TIRES)	REAL	LANDINGS PER TIRE
F23	Avg TIRE COST (TIRES)	REAL	COST PER TIRE
F24	SECURING METHOD TECHNOLOGY (RADOME)	SCALED	SCALED VALUE

TABLE B-3 OPERATIONAL PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
		SCALED	WEIGHTED NUMBER
002	Avg Mission Mix		
003	Avg Take-off Speed	Real	Knots
004	Median Take-off Distance	Real	Feet
005	Percent of Max Take-off Wt	Real	Percent
006	Avg Climb Rate	Real	Feet/min
007	Avg Cruise Speed	Real	Knots
008	Avg Cruise Altitude	Real	Feet/10
009	Avg Descent Rate	Real	Feet/10 per min
010	Avg Landing Speed	Real	Knots
011	Minimum Landing Distance	Real	Feet
012	Avg Landing Wt	Real	lb's/1000
013	Total Flying Hours per ACFT	Real	Hours/ACFT/YR
014	Training Flying Hours per ACFT	Real	Hours/ACFT/YR
015	Operations Flying Hours per ACFT	Real	Hours/ACFT/YR

TABLE B-3 OPERATIONAL PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
016	MISC FLYING HOURS PER ACFT	REAL	HOURS/ACFT/YR
017	TOTAL LANDINGS PER ACFT	REAL	LANDINGS/ACFT/YR
018	TRAINING LANDINGS PER ACFT	REAL	LANDINGS/ACFT/YR
019	OPERATIONS LANDINGS PER ACFT	REAL	LANDINGS/ACFT/YR
020	MISC LANDINGS PER ACFT	REAL	LANDINGS/ACFT/YR
021	TOTAL SORTIES PER ACFT	REAL	SORTIES/ACFT/YR
022	TRAINING SORTIES PER ACFT	REAL	SORTIES/ACFT/YR
023	OPERATIONS SORTIES PER ACFT	REAL	SORTIES/ACFT/YR
024	MISC SORTIES PER ACFT	REAL	SORTIES/ACFT/YR
025	Avg possessed ACFT	REAL	ACFT/MO/YR
026	MAXIMUM ACFT SPEED	REAL	MACH
027	MAXIMUM ACFT CEILING	REAL	FEET/10
028	ACFT CREW SIZE	REAL	NUMBER/ACFT
029	Avg Sortie Length	REAL	HOURS/SORTIE

TABLE B-3 OPERATIONAL PARAMETER IDENTIFICATION

TABLE B-4 ENVIRONMENTAL PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
E02	BASE ALTITUDE	REAL	FEET
E03	NO OF SNOW DAYS	REAL	DAYs
E04	TOTAL SNOW FALL	REAL	INCHES
E05	MEAN SNOW DEPTH	REAL	INCHES
E06	NO OF RAIN DAYS	REAL	DAYs
E07	TOTAL RAIN FALL	REAL	INCHES
E08	NO OF HAIL DAYS	REAL	DAYs
E09	RELATIVE HUMIDITY (AVG)	REAL	PERCENT
E10	NO OF THUNDER DAYS	REAL	DAYs
E11	NO OF SLEET DAYS	REAL	DAYs
E12	NO OF FOG DAYS	REAL	DAYs
E13	PREDOMINATE WIND DIRECTION	SCALED	DEGREES
E14	MAXIMUM CROSSWIND'S LESS THAN 10 MPH	REAL	DAYs
E15	MAXIMUM CROSSWIND'S 10-19 MPH	REAL	DAYs

TABLE B-4 ENVIRONMENTAL PARAMETER IDENTIFICATION

TABLE B-5 MAINTENANCE PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
M02	Avg Or Rate (Jan-Sept 1977)	REAL	PERCENT
M03	Avg Norm Rate (Jan-Sept 1977)	REAL	PERCENT
M04	Avg Nors Rate (Jan-Sept 1977)	REAL	PERCENT
M05	Total Unschedule Maintenance Manhours Expended per ACFT	REAL	HOURS/ACFT/YR
M06	Avg Turn-around Time-Maint (per ACFT)	REAL	CLOCK HOURS
M07	Total General Support (01-09) Manhours per ACFT	REAL	HOURS/ACFT/10/YR
M08	Total General Support - 01 Manhours per ACFT Ground Handling and Servicing	REAL	HOURS/ACFT/10/YR
M09	Total General Support - 02 Manhours per ACFT Aircraft Cleaning	REAL	HOURS/ACFT/10/YR
M10	Total General Support - 03 Manhours per ACFT Look Phase of Scheduled Inspections	REAL	HOURS/ACFT/10/YR
M11	Total General Support - 04 Manhours per ACFT Special Inspections	REAL	HOURS/ACFT/10/YR
M12	Total General Support - 05 Manhours per ACFT Preservation and Storage	REAL	HOURS/ACFT/10/YR
M13	Total General Support - 06 Manhours per ACFT Arming and Disarming	REAL	HOURS/ACFT/10/YR
M14	Total General Support - 07 Manhours per ACFT Preparation and Maintenance of Records	REAL	HOURS/ACFT/10/YR
M15	Total General Support - 09 Manhours per ACFT In-Shop General Support	REAL	HOURS/ACFT/10/YR

TABLE B-6 AIRCRAFT GENERAL PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
602	YEARS SINCE AIRCRAFT WAS PRODUCED	REAL	YEARS
603	AIRCRAFT EMPTY WT	REAL	LBS/100
604	MAX GROSS WT - TAKE-OFF	REAL	LBS/100
605	AIRCRAFT WING AREA	REAL	SQ/FT
606	AIRCRAFT ASPECT RATIO	REAL	PERCENT
607	TOTAL FUEL CAPACITY	REAL	GALLONS
608	Avg AIRCRAFT WING LOAD	REAL	LBS/SQ FT
609	YEARS SINCE ENGINE PRODUCTION	REAL	YEARS
610	NO OF INSTALLED ENGINES PER ACFT	REAL	NUMBER
611	ENGINE WT PER ACFT (ALL ENGINES)	REAL	LBS/10
612	TOTAL THRUST PER ACFT	REAL	LBS/10
613	DESIGNATED CLIMB RATE	REAL	FEET/MIN/10
614	NO OF GENERATORS PER ACFT	REAL	NO/ACFT
615	TOTAL MAINT MANHOURS PER FLIGHT HOUR	REAL	MANHOURS PER FLT HR

TABLE B-6 AIRCRAFT GENERAL PARAMETER IDENTIFICATION

VARIABLE I.D. NUMBER	LABEL NAME	KIND OF DATA REAL/SCALED	UNIT OF MEASURE
616	TOTAL FAILURES PER FLIGHT HOUR	REAL	NO/ACFT/YR
617	YEARS SINCE ACFT FIRST FLIGHT	REAL	YEARS
